NuFS 139 section 3 Summer 2016

# Interpreting population pyramids Part I: In class, 6/28 Part II: Expository Essay Due to Canvas, Thursday, 6/30/16

This assignment meets General Education Learning Outcome, GELO 3: Apply a scientific approach to answer questions about the earth and environment.

You will complete the worksheet below with partners or small groups in class. Individually, you will then write an essay on population issues revealed through the worksheet, class lectures, and the video World in the Balance.

Purpose: We use demographic indicators and population pyramids to understand population dynamics, make decisions about environmental and policy issues, and predict future trends. In this activity you will:

Pages1-7:

Compare population pyramids for developing and industrialized countries and analyze
population growth, and environmental and/or policy issues within the countries.

Examine other demographic data that can influence the impact of population on the environment.

For questions that require mathematical calculations, the answers are provided. You must do the computations (show your work) that will result in that answer.

Page 8:

4. Integrate the concepts into an essay on population.

#### Part I: Calculations

#### Problem 1

Examine the population pyramids of the two most populous countries in the world, China and India (page 4). From the shape of the population pyramids, predict which country is growing faster and explain why.

India is growing faster, which is 1.2% population rate than China C.4%. The flatility rate is higher than China, and the death rate is lower

Calculate the percent of population under the age of 15. First estimate the total number of people in China and India that are less than 15 years old (look at Population Pyramids for China & India 2014). Divide that number by the midyear population (Table 1 – Demographic Indicators for 2015) and multiply by 100 to get the % of the total population under the age of 15. Please show your calculations.

China = 289 millions

India = 468

$$\frac{289}{1.361} = 212.34 \times 100 = 212.34\%$$

India = 468

 $\frac{408}{1.251} = 326.14 \times 100 = 326.14\%$ 

Percent (%) of population under the age of 15 in China: Answer: approximately 17%

Percent (%) of population under the age of 15 in India: Answer: approximately 28% A Baths

Why is the percentage of individuals under the age of 15 a good indicator of future population growth?

Is the population of China or India growing faster? List 2 demographic indicators (from Table 1) that support your answer.

India is growing faster O Higher festality rate

O Lower mortality rate

Refer to the IDB Summary Demographic Data for Kenya

Using the midyear population data for Kenya, calculate the % of women of childbearing age in 2000 and 2025 (# women 15 - 49 years old divided by total # women). Please show your calculations.

$$2000 = \frac{7.318}{15,122} = 48\%$$
  $2025 = \frac{14120}{29397} = 58\%$ 

Percent (%) of women of child-bearing age in 2000: Answer: 48%

Percent (%) of women of child-bearing age in 2025: Answer: 58%

How will this change impact future population growth?

blomen of child-bearing age is increasing, which will have higher population rate than before.

-Mare infants qualify.

Refer to the IDB Summary Demographic Data for the United States

Calculate the adult dependency ratios for 2000 and 2025. Divide the midyear population data into 3 sections: children under age 15, working age adults (15 - 64 years old), and senior citizens over age 65. Calculate the adult dependency ratio (# of senior citizens divided by # of working age adults). Please show your calculations.

|          | 2000    | 1 2000  |   |
|----------|---------|---------|---|
| Children | 58,991  |         | Year 2000 = 34,854 - = 199                |
| Adults   | 182,172 | 69,569  | 182,172                                   |
| Senior   | 31,836  | 63,196  | $Year 2025 = \frac{63,196}{216,573} = 20$ |
|          |         | a 2/140 |   |

Adult dependency ratio in 2000: Answer: 19%

Adult dependency ratio in 2025: Answer: 29%

In Japan there's no got police, younger pol need to work, no one take care someons.

9%

What trend do you notice? How do you explain this change?

The adult dependency is increasing as population is decreasing in companson to the # of Jenior citizens alive & live

What will be the impact of this trend on government policies? Why is it important for a country to have the majority of its population in the 15 - 64 age group?

Govt. policies will have to shift towards caring for the senior citizens, as there is an inadequate of of working adults to do so. It is impostant

Problem 4 because that is the country's workfore I providers
From class lecture, discussions, demographic data and video: World in the Balance describe two key issues (gender, health, environmental, social or political) that are influencing the current population patterns for:

India - Sacal, political.

O "gender excide"; sex based abortions; women have no cartrol of reproductive health

@ Reproduction of sons, since daughters are social liability as well as economic

Japan

- O Decreasing family/household sizes; decreasing population
- 1 Long life expectorcy 1 Low immigration vare

Kenya

- O Spread of HIV/AIDS courry death, especially in women
- Depositivation in women of child bearing age leading to reproduction due to lack of contraception.

@ First Hrican country to reduce population by using tamby pan Problem 5

The growth rates for China, India, Kenya, Japan and the US in 2015 are shown in the table below. The growth rate of a country (or how fast a population is growing) is calculated as the (number of births + migrants – deaths) divided by the total population (use 1000 here, since birth and death rates are per 1000.

Using the data in Table 1, Demographic Indicators for 2015, determine the biggest contributor to the growth rate of each of these countries: births (fertility), deaths (mortality) or migration? (Consider indicators for high or low birth, death & migration rates)

| Country | Growth rate in 2015 | Biggest contributor                      |
|---------|---------------------|--|
| India   | 1.2%                | High festility, low death                |
| China   | 0.4%                | 1 Postuity                               |
| Kenya   | 1.9%                | High feetility, law motality             |
| Japan   | -0.2%               | law festility [high mitality]            |
| U.S.    | 0.8%                | high migration rates high ich birth rate |

Part II: Population Essay (25 points)

Write a 2½-page essay on population issues, using data from your calculations and the video World in the Balance. Your essay should be organized as below:

Paragraph 1: Introductory Paragraph/Thesis Statement - Introduce the topic and include your thesis statement.

Paragraph 2: Supporting Point – Include one idea to support your thesis, and support with data or information from calculations.

Paragraph 3: Supporting Point - Include one idea to support your thesis, and support with data or information from calculations.

Paragraph 4: Supporting Point - Include one idea to support your thesis, and support with data or information from the video.

Paragraph 5: Concluding Paragraph – Briefly restate thesis, 3 supporting points, and include a concluding thought.

| Population Essay<br>Rubric  | Excellent: 5  | Good: 4   | Fair: 3   | Poor: 2  |
|---|---|---|---|--|
| Introduction  | Introduction, addresses<br>the topic directly, and<br>has a clear thesis<br>statement.  | Introduction addresses<br>the topic, and has a<br>clear thesis statement.   | introduction attempts to<br>address the topic, and<br>has a fairly clear thesis<br>statement.   | Introduction poorly<br>addresses the topic, and<br>has an unclear thesis<br>statement.   |
| Body Paragraphs   | Body paragraphs<br>contain clear topic<br>sentences, support the<br>thesis, and are<br>exceptionally well<br>organized.   | Body paragraphs have<br>topic sentences, support<br>the thesis, and are fairly<br>organized.  | Body paragraphs<br>support the thesis,<br>attempt to address the<br>topic, and are fairly<br>organized.   | Body paragraphs do not<br>sufficiently support the<br>thesis and are not<br>organized.   |
| Examples  | Examples are specific,<br>sufficient, and<br>significant; they are<br>clearly explained and<br>connected directly to<br>the thesis.   | Examples are specific,<br>sufficient, and<br>reasonably well<br>explained; they support<br>the thesis.  | Examples and<br>explanations are fair<br>and/or insufficient; they<br>provide some support to<br>the thesis.  | Examples and<br>explanations are unclear<br>and insufficient; they<br>provide little support to<br>the thesis.                                       |
| Conclusions   | Conclusion clearly<br>restates the thesis,<br>reinforces the major<br>points and makes a<br>broader statement about<br>the topic.   | Conclusion sums up the thesis and reinforces it well.   | Conclusion does not fully sum up or reinforce the thesis.   | Conclusion sums up the thesis poorly with little reinforcement.  |
| Vriting (spelling,<br>rammar,<br>unctuation, and<br>ord choice) and<br>ollowing<br>irections. | Spelling, grammar, and<br>punctuation are<br>accurate and nearly<br>perfect; language is<br>precise and well<br>chosen, sentences are<br>rich and varied. Format<br>is exactly as directed. | Spelling, grammar, and<br>punctuation are mostly<br>accurate with few<br>errors; language is well<br>chosen, sentences are<br>varied. Format is as<br>directed. | Spelling, grammar, and<br>punctuation are fair<br>with some obvious<br>errors; language is fair,<br>some sentence variety.<br>Format is not as<br>directed. | Spelling, grammar, and punctuation are poor with frequent errors; language is poor, little sentence variety. No attempt to format essay as directed. |
