

Reflection on Genetic Testing Persuasive Presentation

I prepared this Genetic Testing persuasive presentation for the Oral Communication course. Furthermore, for the purpose of developing myself, I am going to evaluate my performance during doing this assignment using the standard Communication Indicators. I consider myself intermediate in determining the nature and extent of information needs due to my ability to understand the nature, topic and scope of the assignment with a minimal assistance from my instructor. I also believe that I am intermediate in accessing needed information. Although it was hard to find reliable resources in the form of doctors' opinions, I solved this problem by asking my sister (who is a doctor) to help me find medical articles that contain the needed information for my assignment. Based on the huge amount of help I required to critically evaluate the quality of information in relation to need, I think I stand in the beginning level in this indicator. Reflecting on the way I presented my work in class, I believe I am intermediate in preparing and delivering effective written and oral communications. I practiced presenting many times, prepared notes to facilitate the information for the students, in case I noticed that they do not comprehend any information, and I was very organized during presenting. Finally, considering my excellent skills in referencing and performing the in-text-citation, I evaluate myself as advanced in adhering to ethical practices in the use and communication of information.
